

page on the class website for details.

1 Minimax

For the following game tree, carry out minimax search. Give the value for each node.

2 Alpha-Beta pruning

For the same game tree perform alpha-beta pruning. Let $(\alpha, \beta)_i$ be the α - β values passed down an edge to node i . Similarly, v_i is the value passed up edge i , etc.. Show the sequence of steps, by giving the (α, β) values on the way down, and the v values on the way up. See the example in the Practice Problems on the class website. https://dsbrown1331.github.io/intro-ai-class/practice/minimax_practice_sol.pdf Cross out the branches that are pruned.
